6.1 Code Layout, Readability and Reusability – TheChaiShop&Co CRM

Best Practices for Maintainable, Scalable CRM Development

01

01. Apex Code Structure

- **Triggers** → Handle DML events only
- **Classes** → Business logic separated
- **Handlers** → Service layer for reusable logic

Keep logic modular & organized

02

02. Naming Conventions for Objects & Fields

- **Objects:** Customer__c, Order__c (PascalCase + __c)
- **Fields:** chai_type__c, order_status__c (lowercase + __c)
- **Consistent, descriptive, predictable names**

Improves clarity & readability

03

03. Comments and Documentation

- Explain WHY, not just WHAT the code does
- Add header comments to Classes & Methods
- Keep docs updated as code evolves

Easier onboarding & maintenance

04

04. Reusable Components — Flows & Email Templates

- Flows → Automate processes without hardcode
- Email Templates → Branded chai order confirmations
- Reuse across automations, approvals & cases

Reduce duplication, ensure consistency

05

05. Validation Rules for Data Integrity

- Enforce required fields: chai_type__c is not empty
- Validate: order_total__c > 0 to prevent errors
- Validate phone/email format for customers

Protect data quality & accuracy

Project Development Phase - Project Flow - TheChaiShop&Co CRM

Salesforce CRM Implementation • Step-by-Step Guide

13 Milestones • Vertical Timeline

1. **Milestone 1**
   Creation of developer account
   Setup Salesforce developer org & account access
2. **Milestone 2**
   Object Creation
   Create Standard & Custom objects for CRM data
3. **Milestone 3**
   Tabs
   Configure custom tabs for navigation & access
4. **Milestone 4**
   The Lightning App
   Build Lightning App for TheChaiShop&Co operations
5. **Milestone 5**
   Global Picklist
   Define global picklist value sets for consistency
6. **Milestone 6**
   Fields and Relationships
   Create fields, lookups, master-detail relationships
7. **Milestone 7**
   Creation of Page Layout
   Design page layouts for user experience
8. **Milestone 8**
   Creation of Record Types
   Configure record types for different processes
9. **Validation rules**
   Implement validation rules for data integrity
10. **Milestone 10**
    Email Templates
    Create email templates for automated communications
11. **Milestone 11**
    Flows
    Automate business process using Salesforce Flows
12. **Milestone 12**
    Repots and Dashboards
13. **Milestone 13**
    Deployment, testing & project handoff complete

What you'll learn

- **Real Time Salesforce Project**
  hands-on CRM development experience
- **Standard and Custom objects**
  understanding data model fundamentals
- **Picklist Value sets**
  global & dependent picklist management
- **Types of Fields & their relationships**
  Lookup, Master-Detail, Rollup,
- **Page Layouts**
  Customized UI for profiles & roles
- **Record Types**
  tailored processes & picklist values
- **Validation Rules**
  error handling & data validation logic
- **Email Templates**
  classis, Lightnning, merge fields usage
- **Flows**
  automation with Flow Builder, triggers & actions
- **Reports and Dashboards**
  KPI tracking & visual analytics

Key Outcome: Fully functional CRM solution for TheChaiShop&Co to manage customers, sales, and service efficiently

6.3 Functional Features

TheChaiShop&Co CRM Application • Built on Salesforce Lightning Platform

Empowering your tea shop with streamlined workflows, automation, and real-time insights

Customer Management
- Add, view & edit customers
- Track customer profiles & history
- Manage contact details & preferences

Order Management
- Create & track orders
- Monitor order status in real-time
- Manage fulfillment & delivery

Billing Automation
- Auto calculate invoices & totals
- Tax & discount calculations
- Generate & email invoices instantly

Reports & Analytics
- Sales performance reports
- Revenue & trend analysis
- Customizable dashboard metrics

Dashboard Visualizations
- Interactive charts & KPIs
- Real-time sales overview
- Visualize data with graphs

Email Automation
- Automated notifications via flows
- Customer follow-up emails
- Order confirmation & alerts

Lightning App Navigation
- Easy app navigation & menus
- Quick access to key features
- Customizable Lightning home

Data Security
- Role-based access controls
- Validation rules & permissions
- Secure data protection & audit
